PROFILE

I'm a third-year B.Tech Computer Science student at Mahindra University, Hyderabad, currently interning with PwC India's Advisory practice (Cloud, Engineering & Data Analytics) in Hyderabad. My work sits at the intersection of applied machine learning and real-world data systems — I've built end-to-end ML pipelines for energy forecasting, healthcare classification, and HR analytics, and I'm now getting hands-on with cloud data pipelines. Outside coursework I completed a 6-month AI/ML training program at i-Hub, IIIT Hyderabad, and a product management program with BITSOM × Masai focused on generative and agentic AI.

EXPERIENCE

Advisory Intern — Cloud, Engineering & Data Analytics — PwC India

2026 — Present

Interning with the CEDA practice in Hyderabad, working on SQL-driven data analytics workflows. Building hands-on exposure to Google Cloud Platform tooling — BigQuery, GCS, Cloud Composer — through structured, self-directed technical training.

Independent ML Research — Personal Projects

2024 — Present

Built end-to-end ML pipeline for day-ahead electricity load forecasting across 3 European countries using 50k+ hourly OPSD observations. Developed healthcare classification models (diabetes, heart disease, COVID) on real clinical datasets during i-Hub IIIT-H program. Built HR analytics system predicting both employee attrition (82% F1) and future salary for ~\$2M financial exposure estimate. Delivered product-focused AI capstone through BITSOM × Masai PM program.

EDUCATION

B.Tech in Computer Science & Engineering — Mahindra University, Hyderabad

2023 — 2027

Ecole Centrale School of Engineering. Coursework spanning algorithms, systems, and applied machine learning.

Student Training Program in AI/ML — i-Hub at IIIT Hyderabad

Sep 2024 — Mar 2025

6-month intensive program covering supervised/unsupervised learning, deep learning architectures, and end-to-end ML project development.

Product Management with Generative & Agentic AI — BITS School of Management × Masai School

Sep 2025 — Mar 2026

PM program focused on building and shipping AI-native products using generative and agentic AI technologies.

CAPABILITIES

Languages

Python, C, SQL (MySQL, PostgreSQL), JavaScript, HTML, CSS

Tools

Git & GitHub, Jupyter, VS Code, Linux / WSL

Frameworks

React, Streamlit, TensorFlow / Keras, PyTorch (basics), scikit-learn

ML & Data

Data Analytics, Pandas, NumPy, Seaborn, Matplotlib, spaCy, SARIMA / LSTM / GRU

SELECTED PROJECTS

OPSD-PowerDesk — Day-Ahead Electricity Load Forecasting

Jan 2025 – Apr 2025 · Python, TensorFlow, SARIMA, LSTM, GRU, Streamlit, CUDA

End-to-end ML pipeline for day-ahead electricity load forecasting across Austria, Belgium, and Bulgaria using 50,000+ hourly OPSD observations.

Employee Attrition & Salary Prediction

Oct 2024 · Pandas, Seaborn, Logistic Regression, Ridge Regression

Multi-step classification and regression pipeline on the IBM HR dataset predicting attrition risk and future salary in one unified view.

Healthcare ML Models

Sep 2024 – Mar 2025 · Python, scikit-learn, Pandas, Jupyter

Collection of ML projects built during the 6-month AI/ML training program at i-Hub, IIIT Hyderabad. Classification and regression on real clinical datasets.

MOSP — AI-Powered Mess Optimization System

Mar 2026 · Product Design, AI Workflow Design, Agentic AI

Capstone project for the BITSOM × Masai Product Management with Gen & Agentic AI program. An opt-in based system that uses AI to predict mess attendance, reduce food waste, and create transparent feedback loops between students, owners, and admins.

Satellite Mosaic Scheduling — takeme2space Hackathon

2026 · Python, Greedy Algorithms, Geospatial Scheduling

Built during a 36-hour satellite tasking hackathon. Extended a baseline stop-and-stare scheduler with off-nadir pre-filtering and a greedy mosaic coverage strategy to plan multi-image satellite captures.

This Portfolio — ar-five5.github.io

2026 · React, Vite, Tailwind CSS, Framer Motion

A monochrome, motion-driven personal site built to be as considered as the work it presents — hand-tuned page transitions, scroll choreography, and a data-driven aesthetic in place of stock templates.
